

WO510 watersoftener

WO510 watersoftener

By installing a watersoftener for your humidification system, the optimality of the system efficiency is warranted. The water softener eliminates a considerable part of the calcic out of the water. As a result, the life duration of your humidification system is guaranteed.

The softener is maintained of a high-quality resin core. The moment the water flows through the indicated core, it absorbs the calcium and magnesium particles. As soon as the core is saturated, it will automatically clean itself with salt water from the internal brine barrel.

The watersoftener is furnished with:

- integrated resin core
- internal brine barrel - plain display
- as well as a timer, volume and a combined controlling

Specifications

type	Flow-trough speed	nominal capacity	water consumption/ regeneration	Salt supply	Salt consumption / regeneration
WO 510	0,8 m ³ /uur	25 m ³ °D	70 l	40 kg	1,3 kg

Technical specifications

Weight : WO 510 – 120 kg
Work pressure : 2-7 bar
Connection : 1" external threat
